Application of allowances

What

This policy guides valuers on when and how to apply allowances under section 14L and section 14T of the *Valuation of Land Act 1916* (Valuation of Land Act).

How

Section 14L provides an allowance to developers for profitable expenditure in the development of land.

Section 14T provides an allowance to developers who have subdivided land but have not yet sold the land.

Why

This policy will ensure that allowances are applied in a way that is:

- consistent and accurate
- transparent
- in line with the Valuation of Land Act.

1 Policy

1.1 Scope

Deducting allowances

allowance for profitable expenditure

allowance for subdivision

When you value land, you must deduct the amount of any allowances for profitable expenditure or any allowances for subdivision.

Use this policy to assess the amount of the allowances.

1.2 Allowances for profitable expenditure

What is an allowance for profitable expenditure

An allowance for profitable expenditure is a reasonable allowance given to any land for profitable expenditure by an owner, occupier or lessee.

An allowance for profitable expenditure is applicable for any property that meets the criteria set out in section 14L of the Valuation of Land Act and which is not excluded by the provisions of section 14M.

There are two distinct categories of allowance set out under section 14L. These are:

- allowances for any effective land improvements on or appertaining to the land (on-site allowances)
- allowances for visible and effective improvements off the land (off-site allowances).

What items of expenditure attract an allowance for profitable expenditure

For improvements to be eligible for an allowance under section 14L, the improvement must be effective, the expenditure must be profitable, and the allowance must be reasonable. This applies for both on and off-site allowances.

The term effective means that the improvements add to the usefulness of the land.

The term profitable refers to an enhancement in value.

On-site allowance

You must only give an on-site allowance for profitable expenditure for “effective land improvements”. Land improvements are specifically defined in section 4 of the Valuation of Land Act:

- (a) the clearing of land by the removal or thinning out of timber, scrub or other vegetable growths,
- (b) the picking up and removal of stone,
- (c) the improvement of soil fertility or the structure of soil,
- (d) the restoration or improvement of land surface by excavation, filling, grading or levelling, not being works of irrigation or conservation,
- (e) (d1) without limiting paragraph (d), any excavation, filling, grading or levelling of land (otherwise than for the purpose of irrigation or conservation) that is associated with:
 - (i) the erection of any building or structure, or
 - (ii) the carrying out of any work, or
 - (iii) the operations of any mine or extractive industry,
- (f) the reclamation of land by draining or filling together with any retaining walls or other works appurtenant to the reclamation, and
- (g) underground drains.

Off-site allowances

You may give an off-site allowance for items of expenditure which are not on the land itself but have been constructed:

- for the purpose of supplying water to the land, or
- for the purpose of draining the land, protecting the land from inundation or making some other provision for the more beneficial use of the land.

A list of items that can and cannot be considered in establishing an allowance for profitable expenditure is included in the Appendix.

How to calculate an allowance for profitable expenditure**section 7.11 contributions**

Once you have established that an allowance for profitable expenditure is applicable you must calculate the amount of the allowance.

Calculate the difference between the value of the land with the improvements and the value on the assumption that the improvements had not been made.

Any allowance determined must not exceed the actual cost of the improvements. Although cost does not equal value, the actual cost may be used as a guide.

Allowances may be given for expenditure on council section 7.11 contributions (previously referred to as section 94

contributions in the *Environmental Planning and Assessment Act 1979*) in some instances.

The allowances would only be given for the construction of civil works off the land, therefore only that part of the section 7.11 fee that relates to those works will be applicable.

When allowances are not provided

You should not give an allowance for profitable expenditure in certain circumstances. These are detailed in sections 14M and 14O.

In summary, do not provide an allowance:

1.	if the owner of the land was not the owner when the profitable expenditure was incurred
2.	if any building or structure has been erected or any works have been carried out on the land
3.	if the profitable expenditure was incurred more than 15 years before the valuation year at which the value is being determined
4.	if the expenditure was incurred for land leased by the Crown or statutory body.

In relation to the second point:

- erected is to be construed as meaning substantially commenced
- a building, structure or work is a physical improvement that is not a land improvement
- the building, structure or work must be on the land for it to exclude the allowance.

Objections

Objections may be lodged to an allowance for profitable expenditure.

The provisions for lodging an objection to an allowance for profitable expenditure are set out in section 14R of the Valuation of Land Act.

An objection may be made to an allowance for profitable expenditure in the same way as an objection is made to the valuation of any land. The objection may be made on the grounds of an allowance being ascertained, an allowance not being ascertained or the amount of an allowance.

1.3 Allowances for subdivision

What is a subdivision allowance

When land is subdivided, the lots created in the deposited plan are separately valued under section 27B of the Valuation of Land Act.

A subdivision allowance refers to an allowance under section 14T of the Valuation of Land Act. It is an “in line discount” for all the lots in the deposited plan that remain in the hands of the subdivider.

A subdivision allowance may be applicable if any of the lots in a deposited plan are still owned by the subdivider at the date the valuation is made.

Subdivider

There is a definition of subdivider in section 14S of the Valuation of Land Act:

- the subdivider is the person who, either alone or with any other person, owned the whole of the land immediately before the registration of the plan or
- where the land comprised two or more lots, then the subdivider is the person who owned the whole of the land comprising one or more of those lots, either alone or with any other person.

In some cases, a subdivider holding several lots may amend the boundaries of those lots without changing the existing number of lots in the deposited plan. You must consider this as a new deposited plan and determine any allowances accordingly.

How to calculate a subdivision allowance –

To calculate the allowance you must firstly calculate the discount from sale price for lots in a deposited plan. This is the difference between:

The discount from sale price land value

- the total of the land values of the lots had they been sold separately (section 14U(2)(a)), and
- the total of the land values of the lots had they been sold to one person (section 14U(2)(b)).

You must remember that both the total value of the lots sold separately and the total value of the lots sold to one person must reflect market conditions at 1 July in the year the valuations are made.

The best evidence of the total value will be sales of single parcels, possibly within the subdivision.

The primary method of determining the value of the sale in one line is to consider sales where land has been subdivided and then sold in one line. Consideration can also be given to the time, cost and risk of selling the land individually rather than as one in line sale.

You must assume there is both a willing buyer and willing seller. Market conditions change and the allowance applied should reflect the market annually.

When calculating the allowance you must only take into account the lots in that particular plan (not the total number of lots in a development that comprises more than one deposited plan).

Apportioning the discount from sale price

englobo land

Once you have calculated the discount from sale price, apportion it to each lot in the plan. The amount applied to each lot does not have to be the same.

When apportioning the discount from sale price you must take into account the total number of lots in the deposited plan and not just the remainder still in the ownership of the subdivider. This still applies if the subdivider only has one lot left in their ownership.

As a general rule, the market does not apply a discount to residue englobo parcels held for further development. The value of the residue parcel for development purposes already includes an inherent allowance for profit and risk.

If the market indicates no discount is applicable, you must issue a subdivision allowance of \$0.

When an allowance ceases to be applicable (section 14V) it is no longer given.

Example

Residential lots only

A subdivision allowance may be applicable to any class of land. For simplicity, any examples used in this policy refer to residential lots.

Example 1 – residential lots

There are 10 residential lots in a plan. Of these, five have a land value of \$200,000 and five have a land value of \$300,000.

The difference is calculated below:

Total land value of lots assuming sold separately	\$2,500,000
Total land value of lots assuming sold to one person	\$2,250,000
Discount from sale price	\$250,000

The “in line discount” represents 10 per cent of the total land value of the lots if they had been sold separately.

Therefore, the lots with a land value of \$200,000 would have a subdivision allowance of \$20,000 and the lots with a land value of \$300,000 would have a subdivision allowance of \$30,000.

The discount from the sale price (\$250,000) is apportioned equally to each lot based on the percentage of each lot’s value.

Example
Residential lots and
a residue englobo
lot

In many cases the subdivision will result in a number of single residential lots being created with a remaining undeveloped or englobo lot or lots which are to be developed at a later date.

Example 2 – residential lots and a residue englobo lot

The subdivision creates 10 residential lots with a residue englobo lot.

10 lots with a land value of \$200,000 each:	\$2,000,000
One Englobo lot with land value:	\$1,000,000

The difference is calculated below:

Total value of all lots had they been sold separately:
 \$3,000,000

Total land value of all lots had they been sold to one person:
 \$2,800,000

Discount from sale price: \$200,000 (equates to 10 per cent of the total value of the residential lots had they been sold separately)

The discount is then apportioned as \$20,000 to each of the residential lots and \$0 to the englobo lot.

The value of the englobo lot is calculated using sales of englobo land that already reflect an “in line discount” captured in the profit and risk factor.

The assumption that the market does not apply a discount to englobo parcels is true in most situations; however each case must be determined on individual circumstances and annual market conditions.

Allowance to be reasonable and reflect market conditions

When assessing what discount to apply you must consider a willing buyer/seller scenario. In most cases, the subdivider is a developer and if the amount of the discount exceeds their profit margin, they would then be operating at a loss and not willing to sell. This is not reasonable and the seller, in this case, would be likely to market the lots themselves.

When you calculate the allowance you must assume the subdivision has been completed and that all lots are on the market for sale.

Because the allowance is calculated at the end of the development period, any risk associated with development that existed at the start of the project no longer exists.

When a subdivision allowance is not applied

You must not give a subdivision allowance in certain circumstances.

These are outlined below and detailed in section 14V of the Valuation of Land Act:

1.	If there have been any buildings erected on the land or any works carried out since the registration of the deposited plan then a subdivision allowance is not to be given.
2.	The allowance is only applicable for three years and is not to be given after this period. As the allowance is applicable for both land tax and council rates the reference date for the three year period is different. This is discussed in the section below.
3.	An allowance is not applicable if there are no lots left in the deposited plan that are still owned by the subdivider.

Three year time frame

As the allowance is applicable for both land tax and council rates the reference date for the three year period for which a subdivision allowance can be applied is different.

For the purposes of the *Land Tax Management Act 1956* if more than three years have passed from the registration of the deposited plan to 31 December prior to the beginning of the land tax year, then the property is not eligible for a subdivision

allowance.

For the purposes of the *Local Government Act 1993* if more than three years have passed from the registration of the deposited plan to 30 June prior to the beginning of the rating year, then the property is not eligible for a subdivision allowance.

Therefore there is a six month gap when an allowance may be applicable for one rating authority but not the other. In these cases you must calculate an allowance.

It will then be the responsibility of the relevant rating authority to determine if they will use the allowance.

Objections

Objections may be lodged to a subdivision allowance.

The provisions for lodging an objection to a subdivision allowance are set out in section 14W of the Valuation of Land Act.

An objection may be made to a subdivision allowance in the same way as an objection is made to the valuation of any land. The objection may be made on the grounds of an allowance being ascertained, an allowance not being ascertained or the amount of an allowance.

3 Context

3.1 Role of the Valuer General

The Valuer General for NSW

In NSW, the *Valuation of Land Act 1916* establishes the Valuer General as the independent statutory officer responsible for ensuring the integrity of land valuations in NSW.

Valuation Services, Property NSW manages the valuation system on behalf of the Valuer General, outsourcing the majority of valuation services to private valuation firms.

The Valuer General is committed to an open and transparent valuation process that is easy for landholders to understand.

4 Appendix

Typical Subdivision Expenses (Off-site Allowances Only)

SUBDIVISION EXPENSES	ALLOW YES/NO	COMMENTS
Roadworks including kerbing, guttering, tar sealing, drainage	YES	
Footpaths, walkways, cycleways	YES	
Traffic lights, traffic works (e.g. round-about)	YES	Only if they add to the value of the lot.
SOME Section 7.11 fees as well as fees for works by other authorities (see body of this instruction for clarification)	YES	Only the part of the fee that is for works actually constructed, in nearby proximity and that add to the value.
Joint water supply scheme	YES	Only the part of the scheme that is for works actually constructed, in nearby proximity and that add to the value of the land.
Flood retention basins	YES	Only if they are a condition of subdivision
Water and sewer reticulation	YES	
Drainage piping	YES	
Water and sewer amplification	YES	
Earthworks	YES	
Electricity	YES	
Gas	YES	
Telephone cabling	YES	
Costs directly related to subdivision eg survey fees, geotech report	YES	
Supervision and design costs related to construction	YES	Does NOT include developer's fees, financial costs.
Advertising	NO	
Rates and taxes	NO	
Interest charges and other financial fees	NO	
Council fees	NO	
Fees paid to authorities to gain approval	NO	
Professional fees such as for valuers, accountants, legal, marketing, agents	NO	
Council section 7.11 fees where they apply to contributions for maintenance	NO	
Demolition costs of improvements	NO	
Agents' commission	NO	
Ground maintenance	NO	
Security fees	NO	
Developer's profit and risk	NO
